What's New in the Photoshop CS6?

The Dodge and Burn tools are used to lighten, darken or burn out small areas of an image. The Dodge tool softens the image and lets the lighter areas of the image stand out. The Burn tool is used to darken the entire image. The Pen tool can be used for drawing with color, size and shape. Pen tools are very similar to brushes, but they give

you the ability to adjust the edges with details of the pen stroke. And at lot of more tools. But usually Photoshop users often don't look into all the options and tool features. There is a "hidden" part of the tools that many users don't have any idea about. What's behind the 'Passes' option? Passes are special effects used to lighten, colorize, and

sharpen images, filters which can be applied to certain areas of an image, filters that allow you to adjust levels in your images. They are similar to the Levels and Curves tools, as they are all used to modify the overall tonality (lightness or darkness) of an image. But unlike Levels and Curves, most passes can only be applied on one

layer of your image. It is interesting to observe how even this last feature becomes the cause of so much confusion in Photoshop users. How to use the 'Passes' tool? First, you need to create the file, which is very useful. Then you press ALT+OPTION+I to enter the screen shown in the figure. This is the 'Tool

Options' window. Click on "Passes" to open the tool window, which is shown in the figure below. In the first tab, you can select from a list of available passes, and click the "OK" button to apply the pass on the selected layer. In the second tab, you can select the "Next" button to select another pass in the list of available passes or use

the "Previous" button to select an earlier pass. You can also change the size of the brush used for applying the pass by moving the Size slider. (Click on the slider to select a value.) Figure 1.
